Ian Edward Weir

HARD CORE DNA EXTRAS

1. M3/M4 Stainless Steel Nylon Head Grub Screw Plastic Brake Buffer Bolt Screws Hex
This is so you don't scratch up the coating of your anamorphic lens or housing. *M4 - 6mm
https://www.aliexpress.com/store/product/20pcs-M4-5-6-8-10-14-18-22-27-32-stainless-steel-hex-socket-nylon/2959029_32799235237.html

2. 86mm UV filter to protect the front of the Core DNA glass.

3. A custom coupler made from this lens hood fits perfectly. “FOTGA Screw Mount 67mm Standard Metal Lens Hood for Canon Nikon Pentax Sony Olympus”
http://www.amazon.com/FOTGA-Screw-Standard-Pentax-Olympus/dp/B009GFY858
Then a step down ring or step up ring for whatever the size of your front anamorphic thread is. I’m doing 77mm because this is what most of my front clamps are. I had mine machined and cut down for a closer fit to taking lens front.

There is also a Tiffen professional 77mm to 75mm step up ring. *Very rare but out there. This will screw on the back of your Core DNA, which has 75mm threads.

4. Metal back cap for whatever size you end up using for your coupler.
http://www.camera-filters.com/ These guys are great.

Protect the rear glass of Hardcore with Sensei 77mm Center Pinch Snap-On Lens Cap. Good solid fit.

5. Century 86mm +1.6, +2 or +2.6 Achromatic Diopter. This is so you can get close ups. You can find one on ebay for $100 or less if patient. Otherwise it's $550 new. I have an 82mm diopter I use with a step down ring and it works well with no vignetting.

6. Front custom clamps if scope is bigger than 75mm and cannot side in back of Core DNA.
